

Centralize EHS and Chemical Management with Lisam

When your EHS system can't adapt to your processes, you pay for it in delays, workarounds, and rising costs. ComplyStation changes that. Lisam centralizes EHS, Chemicals and SDS Management with a no-code platform built to adapt to your business processes. This configurability results in lower costs to implement and maintain the system and improved compliance efficiencies.

One System for SDS & EHS Management

EHS

Compliance

Tasks, CAPAs, Calendar, Legal Register, MOC

Incidents

Capture, Investigate, root causes, actions, Near misses

Audits

Audits, Inspections, observations, Risks Findings, Actions

Training

Assignments, Status tracking

Environmental

Calculations, Exceedance limits, Metrics, Automated reporting at Asset level

Chemicals

SDS

Centralize and access safety data

Inventory

Track chemicals and locations

Regulatory

Stay compliant with regulatory updates

Labelling

Create and manage labels & GHS info

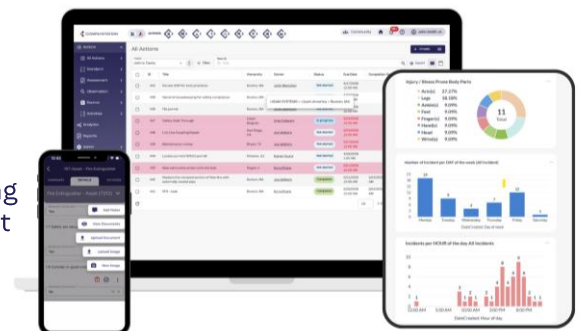

Source & Index

Source & index your chemical SDSs

Unique Strengths of the ComplyStation Platform

ComplyStation gives you a configurable, practical, and affordable system built for mid to large sized companies to match your business processes, not a tool that you must conform to.

- **Proactively assign preventative and corrective actions** with automated notifications and workflows. **Never miss a permit deadline** with all your tasks in one place.
- Pre-emptive audits & inspections to **reduce the risk of costly unplanned events**. Create a safe workplace.
- **Engage more employees** with a mobile app that works offline to capture more data that's accurate. **Save time** by eliminating double-entry and spreadsheet cut & paste.
- **Provide real-time enterprise transparency** for better decision-making. **Cut avoidable NOV costs**.
- **Centralize measurements and calculations** at the asset level with instant notifications. **Reduce costly exceedances** and **transform reporting** from 'days' to 'minutes.'
- **Access accurate chemical content** seamlessly while completing an inspection, calculating emissions, or conducting an incident investigation. **Save time with instant access to any SDS**.

ComplyStation Solutions

ACTIONS Task management including sub-tasks, recurrence, notifications & approvals, calendar, management of change.

REPORTING & ANALYTICS Standard reports library, dashboards, home pages.

PLATFORM Administration functions for managing users/groups/roles permissions, hierarchy, custom fields and layouts, languages, workflow rules, contacts, change tracking.

Add-On Features

ASSESSMENTS Audit & inspections, including configurability of templates, finding triggers, corrective actions, scoring.

INCIDENTS Incident management including summary, impacts, investigations, corrective actions, for any environmental or safety events.

SOURCES Environmental data capture at asset level, including configurable formulas, input forms & spreadsheets, data threshold notifications

EXPRESS Configurable quick entry forms, i.e. near miss, observations, working hours, permit to work, legal register.

TRAINING Training tracking, including course requirements, class scheduling, notifications, status, with option to integrate with LMS.

CHEMICALS Chemical management including search and access to SDS, view indexed chemical content and properties, document request, dynamic regulatory database, chemical inventory management.

MOBILE Native mobile app includes offline data capture for Actions, Assessments, Incidents, Sources, Express, Chemicals. Android, iOS.

DATA WAREHOUSE Data repository replicating production data at defined frequencies to enable client-side queries with third-party BI tools

CONNECTOR Bi-directional data integration technology stack - various options, i.e. outbound call, inbound web api endpoint, SFTP/FTPS .

REGULATIONS Integration with third-party regulatory applicability content.

Why ComplyStation?

Adaptability ComplyStation adapts to your processes with a no-code platform, reducing implementation time, cost, and complexity.

Centralization It centralizes EHS, chemical, and SDS data in one system, eliminating silos and ensuring accurate, real-time information.

Automation Automated workflows and built-in audits keep tasks on track and shift EHS from reactive to proactive.

Visibility Real-time visibility and analytics at the asset level enable faster reporting, better decisions, and reduced compliance risk.
